

Operation and Maintenance Services & Warranty Verification

Operation and Maintenance Expenses are one of the major unknowns for the wind developer. For the first five years a developer will arrange for turbines and components to be covered under a manufacturer's warranty and service contract. The nagging question is what happens after year five when the extended warranty has expired and the manufacturer's only obligation is to keep available - at your cost - replacement parts. How comprehensive is the warranty? What about power curve guarantees? What is the equipment's operating history? What planned maintenance needs to be done to minimize and avoid expensive unplanned outages? ORTECH, together with our experienced affiliates can provide valuable advice in these critical areas.

Equipment

- Equipment Characteristics and Cost
- Warranty Verification
- Coverage Analysis
- Power Curve Guarantees
- Capital Cost Exemptions

Maintenance

- Planned Maintenance Programs
- Reserve Adequacy
- Upgrades & Refurbishments
- Residual Value Calculations
